

Importing Adstream Adobe Premiere Presets for Compliant Exports

1. Download the relevant preset .epr file from

<https://www.adstream.com/au/documentation/tv/aunz-one-delivery-specs/>

| | | | |
|---------------|---|-----------|---------|
| | | | GOP |
| Adobe Presets | ProRes 422 ProRes 422 HQ ProRes 422 LT 720 | AvidDNxHD | XDCAMHD |

2. Open your Premiere timeline – Got to Export settings pane (CTRL + M)
3. Choose relevant format (e.g Quicktime for ProRes filetypes / MXF for MXF preset)
4. Press the import preset button highlighted below.

5. Select the downloaded .epr preset and import.
6. The preset is now saved in your encoder export presets and can be selected from the dropdown for your Adstream upload exports going forward.

Loudness normalisation to -24LKFS has been preapplied to Preset to ensure Audio compliancy.
